**MULTILINE NEXT ACX+.
MOBILE OPERATING TABLE AND RECOVERY
CHAIR FOR OUTPATIENTS IN SURGERY.**

**New: with
a radiolucent
leg section!**

 **GREINER**

THE CHAIR FOR FLEXIBILITY AND MOBILITY IN OUTPATIENT SURGERY.

Outpatient surgery is more than ever the order of the day. For the clinics, of course, but the rapidly growing number of outpatient surgery centre and practice clinics are benefiting significantly from this development. The benefits are shared equally between the patients, who have to be hospitalised in fewer and fewer cases, the facilities, whose economic efficiency is sustainably improved as a result, and finally the cost bearers, whose budgets are relieved. The chairs of the GREINER MULTILINE NEXT AC series contribute directly to the efficient and safe performance of outpatient operations in a wide range of disciplines.

With the new GREINER MULTILINE NEXT ACX+, a fascinatingly simple solution expands the procedure by integrating radiology into the workflow. In addition to the qualities of the successfully launched AC+ mobile operating table and recovery chair, the ACX+ has a radiolucent leg section. This means that patients remain on the same chair from admission through diagnostics and the operating theatre to the recovery zone – without repositioning.

Seated position

Zero gravity/relax position

Bed position

Trendelenburg position

MULTILINE NEXT ACX+. MOBILE OPERATING TABLE AND RECOVERY CHAIR WITH RADIOLUCENT LEG SECTION.

The GREINER MULTILINE NEXT ACX+ fulfils the requirements of today's outpatient surgical facilities for mobile chairs in and around the operating theatre. For surgeries on the head, face and upper limbs, the ACX+ with its short back section and versatile headrest programme offers precisely the flexibility that interdisciplinary work requires. And the new radiolucent leg section extends the range of applications in a multitude of possible ways.

X-rays of the lower leg, ankle and foot with the C-arm, even intraoperatively, are not only quick and appropriate for diagnosis, they are also ergonomic and comfortable for the patient. The GREINER MULTILINE NEXT ACX+ is therefore an interesting and economical alternative for the operating theatre environment.

MULTILINE NEXT ACX+ – Mobile OR table and recovery chair for outpatient surgery

- ♦ Surgeries in maxillofacial, oral, aesthetic and dermatological surgery, ENT, ophthalmology, orthopaedics, hand surgery (arm/hand surgery table as an option) and much more
